Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Glass J.D., Nash N.R., Dry I., Culver D., Wesselingh S.;
"Cloning of m-calpain from mouse nervous system.";
Submitted (JUL-1997) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction (By similarity).
-!- CAPALYTIC ACTIVITY: Preferential cleavage: Tyr-|-Xaa, Met-|-Xaa or Arg-|-Xaa with Leu or Val as the P2 residue.
-!- COPACTOR: Binds 3 calcium ions.
-!- ENZYME REGULATION: Activated by 200-1000 micromolar concentrations

-!- ENZYME REGULATION: Activated by 200-1000 micromolar concentrations of calcium and inhibited by calpastatin.
 -!- SUBUNIT: Heterodimer of a large (catalytic) and a small

(regulatory) subunit.
-!- SUBCELLULAR LOCATION: Cytoplasmic; membrane upon Ca++ binding. SIMILARITY: CONTAINS 5 EF HAND CALCIUM-BINDING DOMAINS. SIMILARITY: BELONGS TO PEPTIDASE FAMILY C2. Translocates to the plasma

SUBCELLULAR LOCATION: Cytoplasmic; Translocates
membrane upon Ca++ binding.
SIMILARITY: CONTAINS 5 EF-HAND CALCIUM-BINDING
SIMILARITY: BELONGS TO PEPTIDASE FAMILY C2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

CATALYTIC ACTIVITY: Preferential cleavage: Tyr-|-Xaa, Met-|-Xaa Arg-|-Xaa with Leu or Val as the P2 residue.

COFACTOR: Binds 3 calcium ions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     European Bioinformatics Institute.

                         membrane upon Ca++ binding (By similarity).
TISSUE SPECIFICITY: UBIQUITOUSLY EXPRESSED.
PTM: THE N-TERMINUS IS BLOCKED.
SIMILARITY: Contains 5 EF-hand calcium-binding cistumitarity: BELONGS TO PEPTIDASE FAMILY C2.
CAUTION: THIS PROTEIN WAS PREVIOUSLY THOUGHT TO HAS SINCE BEEN FOUND TO BE AN INTERMEDIATE FORM MU TYPES.
                                                                                                                                                                              FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction.

CATALYTIC ACTIVITY: Preferential cleavage: Tyr-[-xaa, Met-[-xaa, Met-]-xaa with Leu or Val as the P2 residue.

COFACTOR: Binds 3 calcium inos.

ENZYME REGULATION: Activated by micromolar concentrations of calcium and inhibited by calpastatin.

SUBUNIT: Heterodimer of large (catalytic) and a small (regulator)
                                                                                                                                                  subunit.
SUBCELLULAR LOCATION: Cytoplasmic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PAIPSALGFKELGPY

Biochim. Biophys. Acta 1261:381-33(1995).

-i-FUNCTION: Calcium-regulated non-lysosomal thiol-protease which catalyze limited proteolysis of substrates involved in cytoskeletal remodelling and signal tranduction (By similarity).

-i-CATALYTIC ACTIVITY: Preferential cleavage: Tyr-|-Xaa, Met-|-Xaa or Arg-|-Xaa with Leu or Val as the P2 residue.

-i-COPACTOR: Binds 3 calcium ions.

-i-ENZYME REGULATION: Activated by 200-1000 micromolar concentrations of calcium and inhibited by calpastatin.

-i-SUBUNIT: Heterodimer of a large (catalytic) and a small
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               01-NOV-1997 (Rel. 35, Last sequence update)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ₩.
                    TISSUE SPECIFICITY: Widely expressed.
DOMAIN: The second and third WW domains
interaction with R-SMAD (SMADI, SMAD2 ar
SIMILARITY: CONTAINS 1 C2 DOMAIN.
SIMILARITY: CONTAINS 1 WW DOMAINS.
SIMILARITY: CONTAINS 1 HECT-TYPE E3 UBIC
                                                                                                                               trigger their ubiquitination and proteasome-dependent degradat. Enhances the inhibitory activity of SMAD7 and reduces the transcriptional activity of SMAD2. Coexpression of SMURF2 with SMAD1 results in considerable decrease in steady-state level of SMAD1 protein and a smaller decrease of SMAD2 level.

```
A; Description: catalyzes the hydolysis of peptides
A; Note: Cleaves preferentially after tyrosine, methionine, or arginine residues and befc
C; Superfamily: calpain large chain: calmodulin repeat homology; calpain catalytic domain
C; Keywords: acetylated amino end; calcium binding; cysteine proteinase; EF hand; heterod
F; 2-700/Product: calpain large chain 2 #status predicted AMATY
F: 75-327/Domain: calpain catalytic domain homology <CALPY
F; 529-560/Domain: calmodulin repeat homology <EF1>
F; 529-560/Domain: calmodulin repeat homology <EF2>
F; 605-634/Domain: calmodulin repeat homology <EF2>
F; 637-669/Domain: calmodulin repeat homology <EF4>
F; 637-669/Domain: calmodulin 
                                     A:Note: cleaves preferentially after tyrosine, methionine, or arginine residues and before the protest of the p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A:Molecule type: mRNA; protein
